Fiber-Coupled Semiconductor Laser

135W, 793nm, 200μm

Item Number : 1087338

	Unit	Minimum	Typical	Maximum
Optical Specifications				
CW Output Power (in fiber) ⁴	W	124	135	
Wavelength Centroid	nm	790.0	793.0	796.0
Spectral Width (FWHM)	nm		1.9	4.0
NA within 95% Power Enclosure	-		0.16	
Fiber Core / Clad Diameter	μm		200 / 220	
Fiber NA / Index Type / Cladding Type	-		0.22 NA / Step Index / Dual Clad	
Back Reflection Isolation 1850 - 2100nm	dB	15		
Electrical Specifications				
Electrical-to-Optical Efficiency	%		43	
Threshold Current	A		2.0	
Operating Current	A		10.0	10.0
Operating Voltage	V		31.6	32.5
Thermal Specifications				
Operating (Housing) Temperature ³	°C		+30	
Storage Temperature ³	°C	-25		70
Wavelength Temperature Coefficient	nm / °C		0.28	
Wavelength Current Coefficient	nm / A		0.6	
Mechanical Specifications				
Mass	g		510	
Fiber Length	m	1.5	2.0	
Active Fiber Bend Radius	mm	35		
Product Information				
Item Description	-	e18-18-135-0793-3-200-0.22-SI-FPT-2.0-HT		
Fiber Jacketing	-	900 μm Hytel Tubing		
Fiber Termination	-	FPT		
Export Control Classification Number (ECCN)	-	EAR99		

Notes

- Product image not necessarily representative of exact appearance.
- Production specifications shown are for beginning of life performance at the typical operating temperature. End of life operating current (Iop) is 110% beginning of life Iop.
- A non-condensing environment with relative humidity between 5 - 85% is required for operation and storage.
- The CW Output Power (in-fiber) specified is 3.5% higher than the as-measured values to account for Fresnel loss that wouldn't be present in the intended spliced use condition.
